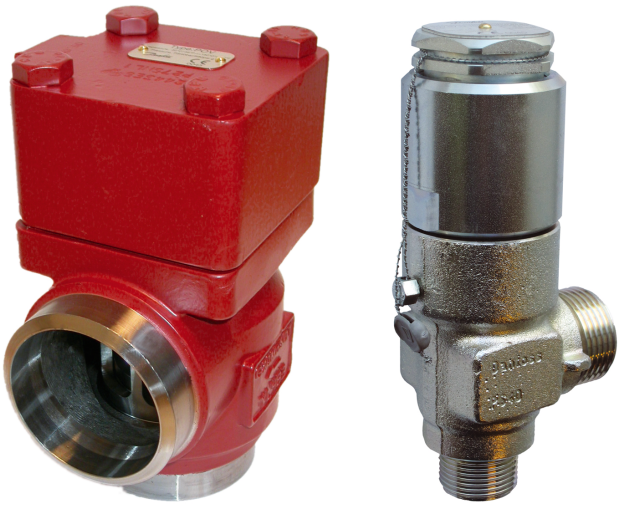
ENGINEERING TOMORROW

Data Sheet

Compressor overflow valve Type **POV**

Designed for protecting compressors against excessive pressure



The POV compressor overflow valve is used in conjunction with the BSV safety relief valve and is specifically designed for protecting compressors against excessive pressure.

Features

- Applicable for the refrigerants HCFC, HFC, R717 (Ammonia), R744 (CO_2).
- The Pilot Operated Internal compressor overflow valve System POV + BSV is available in sizes from DN 40 to DN 80.
- POV + BSV is an internal compressor overflow system thus eliminating the risk of refrigerant leakage to the atmosphere.
- The system renders full protection of the compressor even on increasing back pressure.
- The POV compressor overflow valve (main valve) has a very large capacity even with high back pressure when compared to direct operating back pressure independent pressure relief valves.
- Small dimensions mean easy handling and installation.
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company.

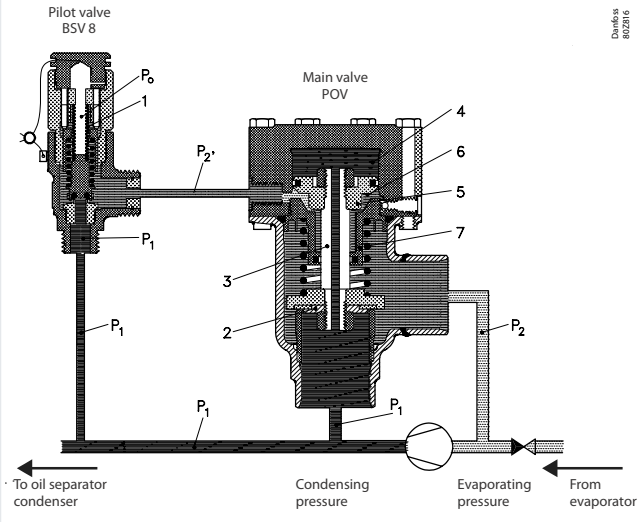
Function

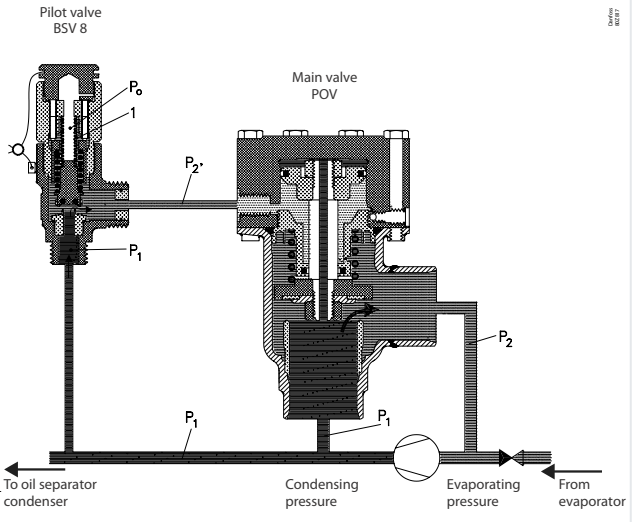
Pilot valve BSV 8
The pilot valve is actuated by the high pressure P_1 and the back pressure P_2". The reference pressure in the stainless steel bellow (1) P_0 is the atmospheric pressure. The effective area of the bellows is equivalent to the area of the valve seating, so the back pressure P_2" does not affect the opening pressure of the valve.

Main valve POV
The main valve is of the normally closed (N.C.) type. The high pressure P_1 acts on the valve inlet side of the valve cone (2). P_1 pressure also passes through the piston rod (3) to the upper chamber (4) of the valve, acting on the top of the piston (5). The area of the piston is larger than the area of the valve seat and this together with the spring pressure keeps the valve closed.

System BSV 8 + POV
When the pressure P_1 reaches the set pressure of the pilot valve, it starts opening. The pressure of the pilot line P_2" and of the lower chamber (6) of the main valve increases. The pressure of the lower chamber is limited by flow through the nozzle (7). When the flow through the pilot valve exceeds the capacity of the nozzle, the pressure of the chamber (6) increases, providing the opening of the main valve. When the pressure P_1 is reduced, the pilot valve closes, and the pressure P_2" is equalized through the nozzle (7). The spring then closes the main valve. The closing time is ≤30 seconds.

Table 1: Function

fig. 1, Inactive system (closed valve)	fig. 2, Active system (open valve)
	




Installation of compressor overflow valve POV + BSV

Set pressure
The BSV 8 set pressure is factory set in the range 15 - 25 bar(g) (145 - 363 psig), where 15 bar(g) is the minimum value for this application Figure 6: Capacity - POV 600.

Standard set pressures
18.0, 21.0, or 25.0 bar(g) (261, 305 or 363 psig). The operational pressure of the plant should be at least 15% below the set pressure of the pilot valve, and the opening pressure of the pilot valve (pset + 10%) must be below the reseating pressure of the safety valve protecting the plant. This implies a perfect operation of the plant.

Back pressure
$P_{2\text{-}0}$ is the effective back pressure of the POV main valve $P_{2\text{-}0} = P_{2\text{-}1} + \Delta P_{outlet}$ where ΔPoutlet is the pressure loss in the outlet line of POV (2).
$P_{2\text{-}1}$ Is normally equal to the evaporating pressure.
$P_{2\text{-}0}$ must not exceed the limits in Figure 6: Capacity - POV 600.

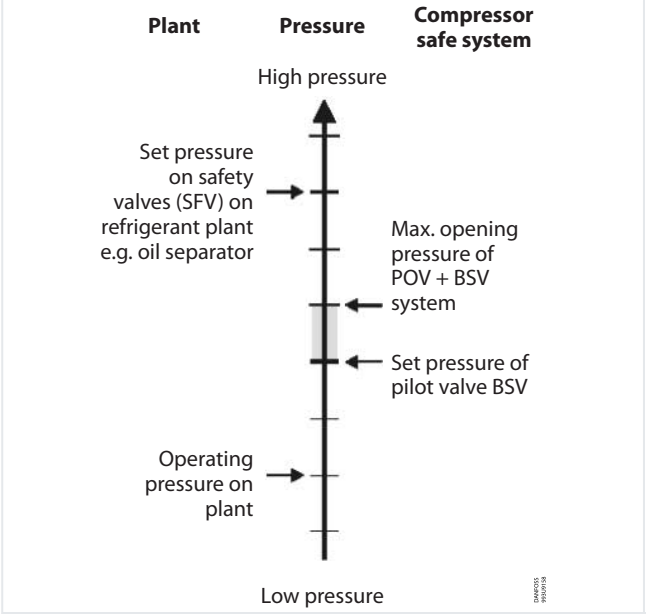
Pressure loss in inlet line

The pressure loss in the inlet line of the POV (1) will not affect the function of the POV + BSV system, but a high pressure drop will reduce the capacity. If the pressure drop in the inlet line ΔP_{inlet} exceed 3% of the opening pressure, the capacity reduction must be taken into consideration by calculation.

Pressure drop in the pilot inlet line

In order to ensure a proper function of the POV + BSV system, the pilot valve must be activated by the plant pressure. It is important that the inlet line of the pilot valve is mounted in a way which ensures that the pilot pressure is identical with the plant pressure. If the pilot pressure is mounted in the inlet line of the POV valve, it must be verified that the pressure drop in the pilot inlet line (3) ΔP_{inlet} does not exceed 3% of the opening pressure.

Table 2: Installation of compressor

POV + BSV system	Flow diagram
	


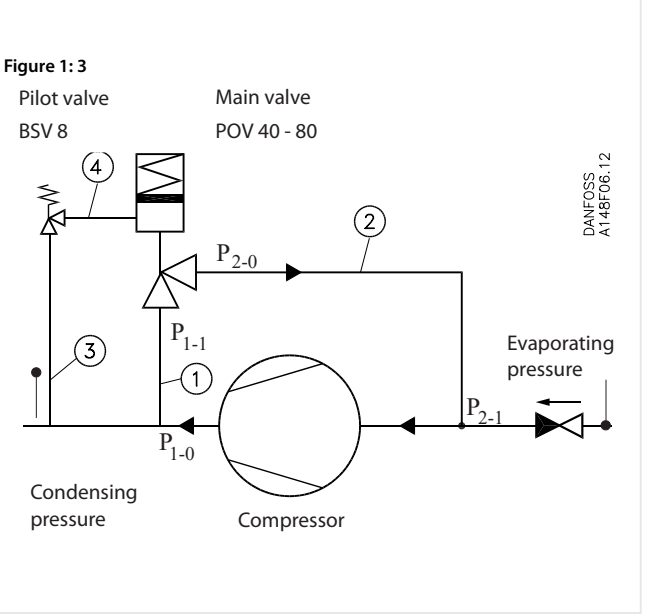


Figure 2: Fig. 4, range of application of BSV 8 - POV

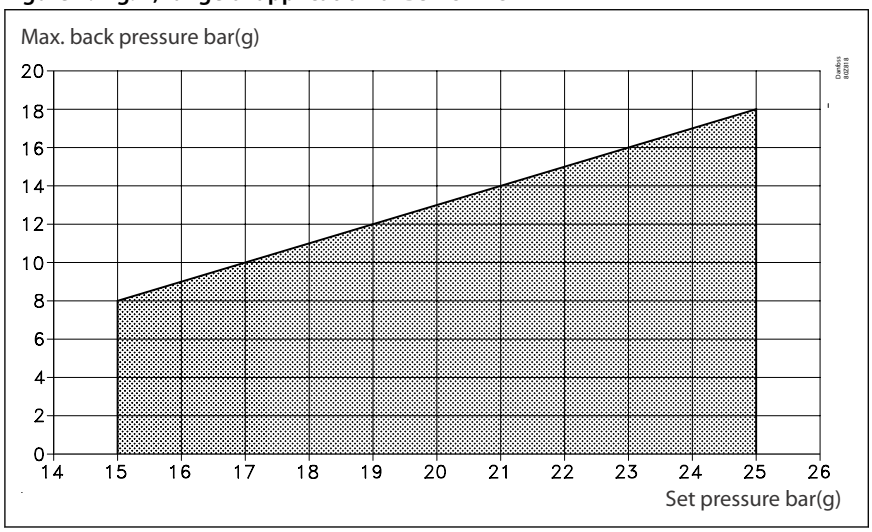


Important: When locating the inlet line to the pilot valve, it is important that the connection is mounted in the gas phase and not in an oil phase, if any.

- Pressure drop in the pilot outlet line
- The pressure loss in the BSV outlet line (4) $\Delta P_{P\text{-}outlet}$ is not critical.
- Minimum internal diameter of the pilot outlet line 8 mm (0.314 in.)
- Maximum length of pilot outlet line 1 m (3.25 ft)

Note: The guidelines mentioned above are securing a safe function of the POV + BSV system, but there might be restrictions from national authorities.

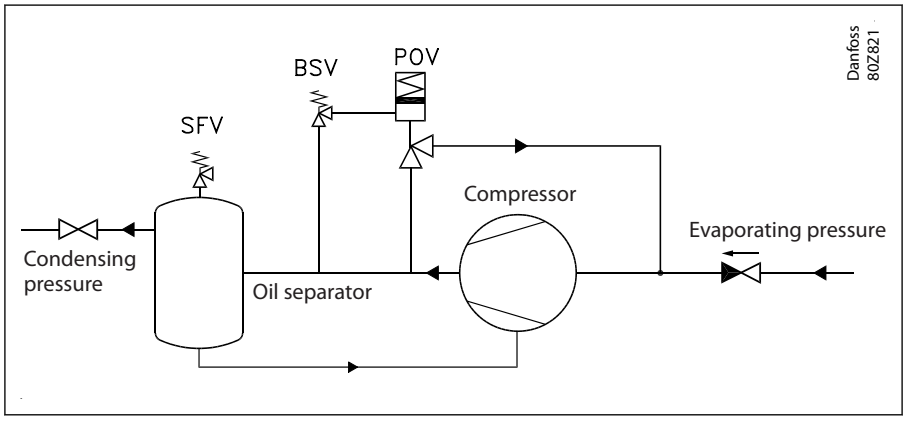
NOTE:

Valve type POV is categorized as a compressor overflow accessory (not as a safety accessory). Hence a safety valve (e.g. SFV) has to be installed to protect the system against excessive pressure.

Fig. 5 shows a typical application of the POV + BSV system. In the example a non return valve has been mounted in the suction line, as well as a shut-off valve in the pressure line. It is good practise and a demand from the authorities of most countries to mount a safety valve on the oil separator.

If the shut-off valve in the pressure line is closed, and all regulation equipment fails, the pressure after the compressor will rise, and the BSV + POV system is activated. Provided that the required motor effect is present, there will be a rise in temperature caused by the compression work, followed by a rise in pressure. Therefore, the safety relief valve of the oil separator must, besides being dimensioned for “normal” heat input, also be dimensioned for heat input, corresponding to the effect of the motor.

Figure 3: Installation of compressor overflow valve POV + BSV



Media

Refrigerants

Applicable for the refrigerants HCFC, HFC, R717 (Ammonia), R744 (CO_2). Flammable hydrocarbons are not recommended. For further information please contact your local Danfoss Sales Company

New refrigerants

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at store.danfoss.com/en/, or by contacting your local Danfoss representative.

Product specification

Pressure and temperature data

Table 3: Pressure and temperature data

Features	Description
Pressure setting range	15 - 25 bar(g) (218 - 363 psig)
Strength test	50 bar(g) (725 psig)
Leakage test	25 bar(g) (363 psig)
PB/MWP	40 bar (580 psig)
Temperature range	–50/+150 °C (–58/+302 °F)

Design

Control/Identification
All pilot valves (BSV 8 Safety Relief Valves) are adjusted, tested and sealed before leaving Danfoss A/S. For that reason Danfoss can only guarantee correct operation, as long as the seal remains unbroken.

Transport/Handling
POV and BSV are supplied separately from Danfoss. BSV safety valves are fitted with special protection covers and packed in purpose made cartons. POV valves are provided with protection covers. It is important that the protective covers remain fitted until the valve is installed. To ensure the exact and precise operation of the valve it must be handled with care.

Re-calibration/servicing
In certain countries the authorities demand that the valves are readjusted at least once a year (see local rules).

Capacity
The design and construction of the compressor overflow valve has been tested and approved by TÜV. This test comprises control of the function of the valve as well as measuring of the capacity, which is the basis of the curves and tables on the following pages.

Installations

To ensure exact operation of the valve it should be installed with the spring housing upwards (refer to "Installation of compressor overflow valve POV + BSV" on the following pages).

When the valve is mounted, it is important to avoid the influence of static, dynamic and thermal stress.

Connections

Available with the following connections:
- Welding DIN (2448)
- Welding ANSI (B 36.10):
  - DN 40, Schedule 80
  - DN 65 - 80, Schedule 40

Figure 4: DIN

Figure 5: ANSI

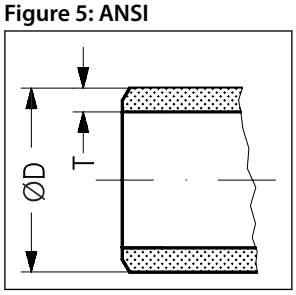

Table 5: Welding ANSI (B 36.10)

Version	Size	Size	øD	T	øD	T	Schedule
	mm	in.	mm	mm	in.	in.	
POV 600	40	1½	48.3	5.1	1.902	0.201	Schedule 80
POV 1050	65	2½	73	5.2	2.87	0.2	Schedule 40
POV 2150	80	3	88.9	5.5	3.5	0.22	Schedule 40

Capacity

The values in the table are based on saturated gas and with 50K superheat. If other operating conditions have to be taken into consideration, the formulas or the Danfoss computation program (Coolselector®2) can be used.

Table 6: Table 1

Version	Nominal size		Flow diameter	Flow area	De-rated, certified coefficient of discharge
	Inlet	Outlet	d_0	A_0	K_{dr}
POV 600	40 mm	40 mm	32.6 mm	835 mm²	0.735
	1½ in.	1½ in.	1.28 in.	1.28 in²	
POV 1050	65 mm	65 mm	39.8 mm	1244 mm²	0.859
	2½ in.	2½ in.	1.56 in.	1.93 in²	
POV 2150	80 mm	80 mm	59 mm	2734 mm²	0.799
	3 in.	3 in.	2.32 in.	4.24 in²	

The discharge capacity of the compressor overflow valves are based on (IS0 4126-1/EN 1268-1 / prEN 1313 6 (1998)).

$$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \times \sqrt{\frac{P}{V}}$$

q_m	Discharge capacity (kg/h)
C	Discharge function depending of the actual refrigerant (κ) see table 2 (-)
A_0	Flow area of the compressor overflow valve (mm^2).
K_{dr}	De-rated coefficient of discharge ($K_{dr} = K_d \times 0.9$), (the Kdr is certified by TÜV) see table 1. (-)
K_b	Correction factor for sub-critical flow. (-) $K_b = 1.0$ when the back pressure is lower than approx. 0.5 × relieving pressure ($P_b < 0.5 \times p$). For all BSV safety valves Kb = 1.0
v	Specific volume of the vapour. (m^3/kg)
p_{set}	Set pressure, the predetermined pressure at which a compressor overflow valve under operation starts to open (pset is indicated on the metal plate on the safety relief valve). (bar gauge)
p_{atm}	Atmospheric pressure. (1 bar)
P	Relieving pressure, p = pset × 1.1 + Patm (bar absolute)

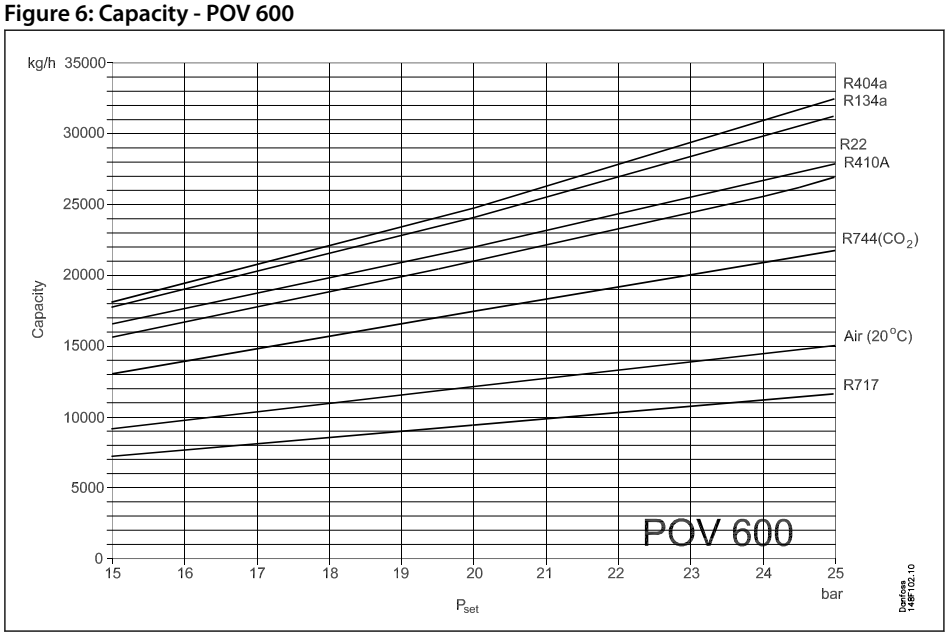
For further details see the above mentioned ISO or EN standards.

Important!
For back pressure higher than 0.5 × p, the Danfoss computer program (DIRcalc™) or the above mentioned standard must be used when calculating the capacity.

Table 7: Table 2. Properties of Refrigerants

Refrigerant number	Isentropic exponent K	Discharge function C
R 22	1.17	2.54
R 134a	1.12	2.50
R 404A	1.12	2.49
R 410A	1.17	2.54
R 717 (Ammonia)	1.31	2.64
R 744 (CO_2)	1.30	2.63
Air	1.40	2.70

Figure 6: Capacity - POV 600



$$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \times \sqrt{\frac{P}{V}}$$

P_{set}	Set pressure in bar(g)
P	Relieving pressure in bar(g)
C	Discharge function
v	Specific volume of the vapour at the relieving pressure P in m^3/kg
q_m	Discharge capacity in kg/h
K_b	Correction factor for sub-critical flow
d_o	Flow diameter seat mm^2
A_o	Flow area seat in mm^2
K_{dr}	De-rated coefficient of discharge at defined lifting height

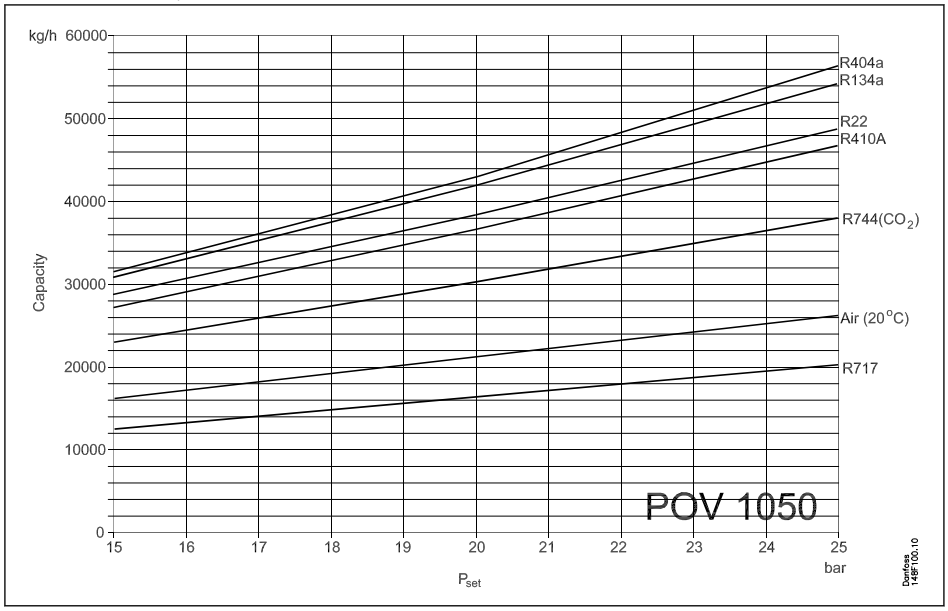
Figure 7: Capacity - POV 1050



$$q_m = 0.2883 \times C \times A_0 \times K_{dr} \times K_b \times \sqrt{\frac{P}{V}}$$

P_{set}	Set pressure in bar g
P	Relieving pressure in bar(g)
C	Discharge function
v	Specific volume of the vapour at the relieving pressure P in m^3/kg
q_m	Discharge capacity in kg/h
K_b	Correction factor for sub-critical flow
d_o	Flow diameter seat mm^2
A_o	Flow area seat in mm^2
K_{dr}	De-rated coefficient of discharge at defined lifting height

Ordering

Table 15: Ordering

Type	Code no.
POV 600 BUTT WELD DIN DN 40	2417+232
POV 600 BUTT WELD ANSI DN 40	2417+047
POV 1050 BUTT WELD DIN DN 65	148F3026
POV 1050 BUTT WELD ANSI DN 65	148F3027
POV 2150 BUTT WELD DIN DN 80	148F3033
POV 2150 BUTT WELD ANSI DN 80	148F3034

Nipples and gaskets

Attention: Fittings for connections must be ordered separately

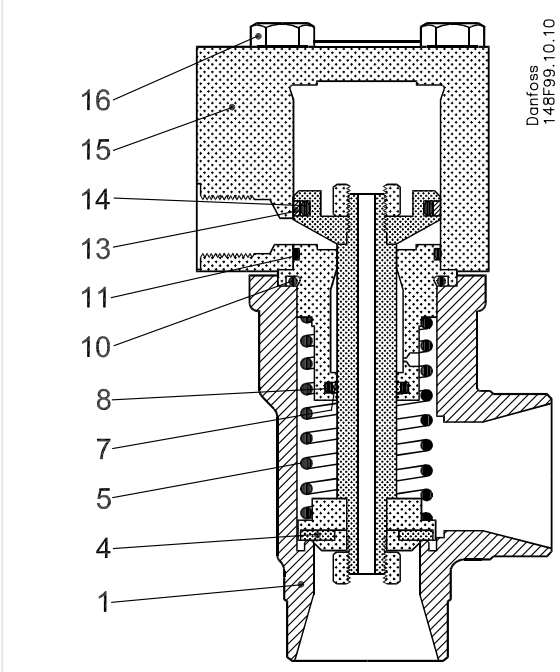
Table 16: Dimensions and weight

Size		Type	Code no.
mm	in.	For system POV + BSV	–
15	½	Set of fittings	148H3453

IMPORTANT:
Where products need to be certified according to specific certification societies or where higher pressures are required, the relevant information should be included at the time of order.

Material specification

Table 17: Material specification

POV 600	POV 1050, POV 2150
	


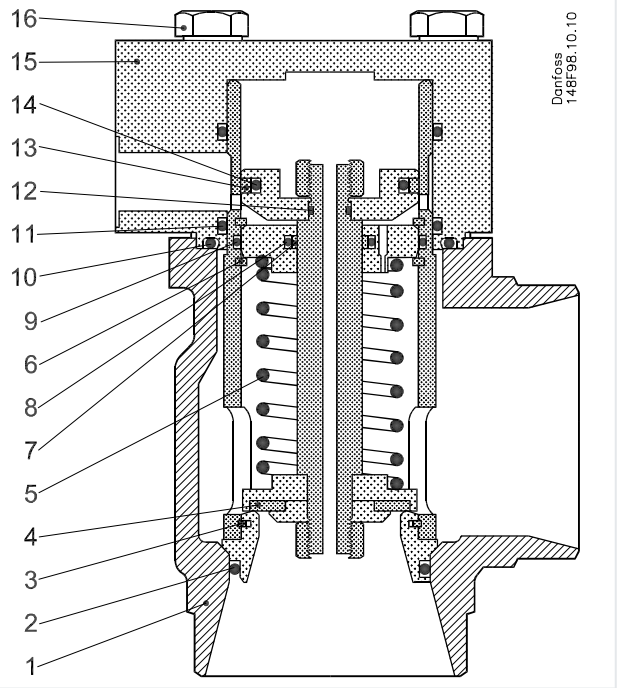


Table 18: Material specification

No	Part	Material	EN	ISO	ASTM
1	Housing	Steel	P285QH		LF2, A350
2	O-ring	Chloroprene (Neoprene)	EN 10222-4		
3	Spring ring	Steel			
4	Telfon washer	PTFE(Teflon)			
5	Spring	Steel			
6	Seeger	Steel			
7	Glide ring	PTFE(Teflon)			

No	Part	Material	EN	ISO	ASTM
8 - 12	O-ring	Chloroprene (Neoprene)			
13	Glide ring	PTFE(Teflon)			
14	O-ring	Chloroprene (Neoprene)			
15	Top cover	Steel			Grade A, A662
16	Bolt	Stainless steel	P275NL1	A2-70	Grade B8

Certificates, declarations and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at danfoss.com or contact your local Danfoss representative if you have any questions.

Table 19: Valid approvals

File name	Document type	Document topic	Approval authority
EAC RU Д-DK.БЛ08.B.03706	EAC Declaration	Machinery & Equipment	EAC
TÜV 0045 202 1204 Z 00354 19 D 001(00)	Pressure - Safety Certificate		TÜV
GMPI TSX71002520151142	Manufacturing Permission		GMPI
EAC RU C-DK.БЛ08.B.01096_20	Pressure - Safety Certificate	PED	EAC
MD 033F0691.AE	Manufacturers Declaration	RoHS	Danfoss
033F0473.AD	Manufacturers Declaration	ATEX	Danfoss

Pressure Equipment Directive (PED)

Pressure Equipment Directive (PED)

POV valves are approved according to the European standard specified in the Pressure Equipment Directive and are CE marked. For further details / restrictions - see Installation Instruction.

Table 20: Pressure Equipment Directive (PED)

POV valves			
CE	**Nominal bore**	**DN40 mm (1½ in.)**	**DN40 mm (1½ in.)**
	Classified for	Fluid group I	
	Category	I	II

ENGINEERING TOMORROW

Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.
Start browsing at store.danfoss.com.

Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at www.danfoss.com/en/service-and-support/documentation.

Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at www.danfoss.com/en/service-and-support/learning.

Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: www.danfoss.com/en/choose-region.

Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at www.danfoss.com/en/service-and-support/downloads.

Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at coolselector.danfoss.com.
